EDUCATION

Bachelor of Computer Science Honours (Co-op Option) | UNIVERSITY OF MANITOBA

Sep. 2022 – Present

- 4.09 / 4.50 GPA

EXPERIENCE

Web Application Developer | AGRICULTURE AND AGRI-FOOD CANADA

Sep. 2025 – Dec. 2025

- Independently migrated a large, actively developed production application from **Vue 2** to **Vue 3** in 1.5 months, shipping to production ahead of expectations with strong mentor recognition for speed and quality.
- Built 7+ **React** administrative screens; design discussions with a senior developer led to a revised componentization standard adopted across the project by other developers and interns.
- Created a reusable Notification System using React Context for use across the company's React applications.
- Established the team's first automated front-end test suite by integrating **Vitest** into a legacy Vue 2 environment and wrote component tests with design recommendations as practical templates.

Systems Student | PUBLIC GUARDIAN AND TRUSTEE OF MANITOBA

Apr. 2024 – Apr. 2025

**Part-time: Sep. – Dec. 2024; Full-time otherwise*

- Independently built a **.NET/WinForms** client search tool over 2 months, managing the full SDLC, and implementing **fuzzy search** with a local asynchronous cache with 100000+ records; it received very positive reception from the mail department as it dramatically improved efficiency over the legacy tool.
- Collaborated with a senior developer on a modernization of the company's core trustee management system, participating in client design meetings and proposing UI mockups that were adopted into the product, and jointly developing coding standards and design patterns for the new framework during feature development.
- Independently identified and proposed database normalization improvements during a design review.

PROJECTS

CO-APP (Software Engineering 2 Group Project) | JAVA, MONGODB, REACT

Jan. 2026 – Apr. 2026

- Built the Job Application **REST API** and filtering backend across two Agile sprints, including paginated results, multi-status filtering, keyword search, and interview date range queries against a MongoDB data store.
- Authored all cross-feature integration tests for the team in addition to full unit test coverage for owned features, achieving near-complete line and branch coverage validated through Codecov in CI.
- Configured the Render hosting environment and designed a **k6** load test across 14 endpoints and 20 concurrent users, achieving a 100% check pass rate and exceeding the target by **747%** (1,694 req/min).

CSSA Game Jam 2025: Crabby Game | GODOT, GDSCRIPT

Nov. 2025

- Won **Audience Choice** and **Highest Potential awards** (highest critic ratings for game quality and mechanics).
- Created and led a 4-person team, drove core game design decisions including the round-based evolution system, directed scope decisions and assigned work to keep the project shippable within the 48 hour limit.
- Implemented the player movement mechanics, character controller, combat system (attack hitboxes, damage, and knockback), and round-based evolution logic in Godot/GDScript with no prior experience in the engine.

TECHNICAL SKILLS

Languages: Java, C#, JavaScript, Python, GDScript, HTML/CSS, C, C++

Frameworks/Libraries: Spring Boot, React, Vue 2/3, .NET/WinForms, Syncfusion

Tools & Platforms: MongoDB, MySQL, Docker, GitHub Actions, Render, k6, Vitest, Azure DevOps, Jira
